Not illustrated. 1917 Excerpt: . and the anterior cardinal) can be analyzed into two parts: a cephalic part which lies close to the neural tube, and a caudal part which has an entirely different position--namely, ventral to the myotomes and lateral to the aorta, in the same position as the posterior cardinal vein. He limited the term anterior cardinal vein to this caudal portion, and analyzed the cerebral portion into a primary vessel (the vena capitis medialis) and a secondary vein (the vena capitis lateralis). At this point Evans gave his beautiful injections of early blood-vessels, published in 1909. He showed the form of the primitive vascular plexus of the brain and also how this plexus covered the surface of the forebrain, encircling the large optic vesicle with a chain of capillaries and spreading over the surface of the thalamus and midbrain. He described how this extensive plexus became a single slender channel along the wall of the hindbrain, leading down to the transverse vein and the duct of Cuvier; and also demonstrated the connections of the plexus of the forebrain and the single vessel of the hindbrain with the aorta. Streeter has recently published a study dealing with the later stages of the vena capitis prima. It was from the branches of this vein that Dr. Mall had shown that the dural sinuses were derived. Streeter has worked out the development of the dural sinuses more in detail and has shown that the only part of the vena capitis...
