AVEC UN PREFAC ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 166 pages. Original publisher: Denver, Colo. : U. S. Dept. of the Interior, U. S. Geological Survey, 2004. OCLC Number: (OCoLC)57345465 Subject: Groundwater flow -- Computer simulation. Excerpt: . . . algorithm is used for controlling errors in the integration of the kinetic reaction rates and the equilibrium equations are solved at each intermediate step of the integration. A three-dimensional Cartesian coordinate system is used to define the region for reactive-transport simulations. Although flow and transport calculations are always three dimensional, the symmetry of conceptually one-and two-dimensional regions can be used to reduce the computational workload of the geochemical calculations. For these cases, the geochemical calculations are performed on a line or plane of nodes and then copied to the corresponding symmetric parts of the simulation region. 1. 5. Computer Resources The computer code for is written in Fortran-90 and C. The code conforms to American National Standards Institute PHAST (ANSI) standards for Fortran-90 and C, with few exceptions, and has proven portable to a variety of computer operating systems, including Windows (Windows95 or later), Linux on personal computers, and Unix on Sun, Digital Equipment Corporation (DEC), Hewlett Packard (HP), and International Business Machines (IBM) computers. Mathematical expressions for kinetic reactions and some output values are calculated by using a Basic-language interpreter (with permission, David Gillespie, Synaptics, Inc. , San Jose, CA, written commun. , 1997). Fully dynamic memory allocation is used by as provided by the Fortran-90 and C languages. Little effort has been PHAST PHAST expended to minimize storage requirements. Consequently, the simulator may require large amounts of memory for execution. The number of nodes defined for the simulation grid is the primary determinant...
